

# NCP4683

## 300 mA, Low Dropout Regulator

The NCP4683 is a CMOS Linear voltage regulator with 300 mA output current capability. The device has high output voltage accuracy, low supply current and high ripple rejection. The NCP4683 is easy to use, with output current fold-back protection circuit included. A Chip Enable function is included to save power by lowering supply current. The line and load transient responses are very good, thus this regulator is suitable for use as a power supply for communication equipment.

### Features

- Operating Input Voltage Range: 1.40 V to 5.25 V
- Output Voltage Range: 0.8 V to 3.6 V (available in 0.1 V steps)
- Output Voltage Accuracy:  $\pm 1.0\%$  ( $V_{OUT} > 2.0\text{ V}$ )
- Supply Current: 50  $\mu\text{A}$
- Dropout Voltage: 0.25 V ( $I_{OUT} = 300\text{ mA}$ ,  $V_{OUT} = 2.8\text{ V}$ )
- High PSRR: 70 dB ( $f = 1\text{ kHz}$ )
- Line Regulation: 0.02%/V Typ.
- Stable with Ceramic Capacitors: 1.0  $\mu\text{F}$  or more
- Current Fold Back Protection
- Available in UDFN4 1.0 x 1.0 mm, SC-70, SOT23 Packages
- These are Pb-Free Devices

### Typical Applications

- Battery-powered Equipment
- Networking and Communication Equipment
- Cameras, DVRs, STB and Camcorders
- Home Appliances

## PIN FUNCTION DESCRIPTION

Pin No. UDFN1010*	Pin No. SC-70	Pin No. SOT23	Pin Name	Description
1	4	5	V <sub>OUT</sub>	Output pin
2	3	2	GND	Ground
3	1	3	CE	Chip enable pin (Active "H")
4	5	1	V <sub>IN</sub>	Input pin
-	2	4	NC	No connection

\*Tab is GND level. (They are connected to the reverse side of this IC.  
The tab is better to be connected to the GND, but leaving it open is also acceptable.

## ABSOLUTE MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Input Voltage (Note 1)	V <sub>IN</sub>	6.0	V
Output Voltage	V <sub>OUT</sub>	-0.3 to V <sub>IN</sub> + 0.3	V
Chip Enable Input	V <sub>CE</sub>	-0.3 to 6.0	V
Output Current	I <sub>OUT</sub>	400	mA
Power Dissipation UDFN1010	P <sub>D</sub>	400	mW
Power Dissipation SC-70		380	
Power Dissipation SOT23		420	
Junction Temperature	T <sub>J</sub>	-40 to 150	°C
Storage Temperature	T <sub>STG</sub>	-55 to 125	°C
ESD Capability, Human Body Model (Note 2)	ESD <sub>HBM</sub>	2000	V
ESD Capability, Machine Model (Note 2)	ESD <sub>MM</sub>	200	V

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

1. Refer to ELECTRICAL CHARACTERISTICS and APPLICATION INFORMATION for Safe Operating Area.
2. This device series incorporates ESD protection and is tested by the following methods:  
ESD Human Body Model tested per AEC-Q100-002 (EIA/JESD22-A114)  
ESD Machine Model tested per AEC-Q100-003 (EIA/JESD22-A115)  
Latchup Current Maximum Rating tested per JEDEC standard: JESD78.

## THERMAL CHARACTERISTICS

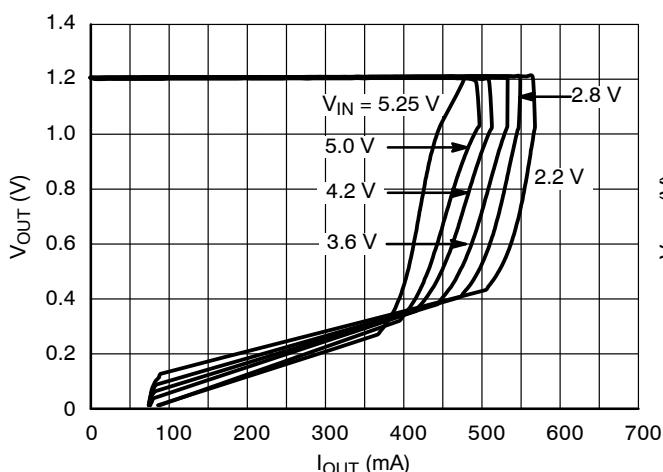

Rating	Symbol	Value	Unit
Thermal Characteristics, UDFN 1.0 x 1.0 mm Thermal Resistance, Junction-to-Air	R <sub>θJA</sub>	250	°C/W
Thermal Characteristics, SOT23 Thermal Resistance, Junction-to-Air	R <sub>θJA</sub>	238	°C/W
Thermal Characteristics, SC-70 Thermal Resistance, Junction-to-Air	R <sub>θJA</sub>	263	°C/W

## ELECTRICAL CHARACTERISTICS

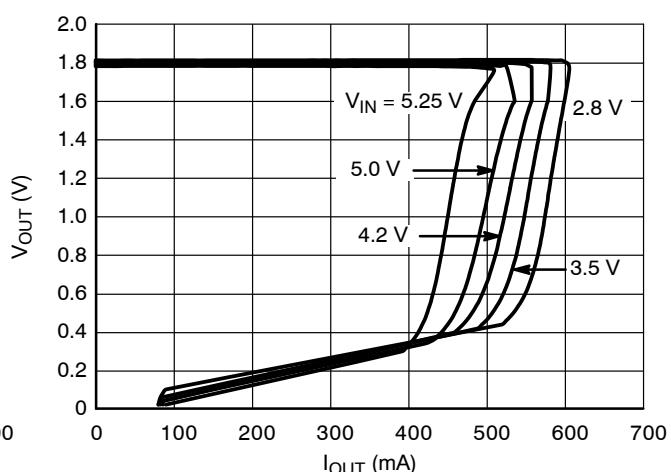

-40°C ≤ T<sub>A</sub> ≤ 85°C; V<sub>IN</sub> = V<sub>OUT(NOM)</sub> + 1 V or 2.5 V, whichever is greater; I<sub>OUT</sub> = 1 mA, C<sub>IN</sub> = C<sub>OUT</sub> = 1.0 μF, unless otherwise noted.  
Typical values are at T<sub>A</sub> = +25°C.

Parameter	Test Conditions		Symbol	Min	Typ	Max	Unit
Operating Input Voltage		V <sub>IN</sub>		1.40		5.25	V
Output Voltage	T <sub>A</sub> = +25°C	V <sub>OUT</sub> ≥ 2.0 V	V <sub>OUT</sub>	x0.99		x1.01	V
		V <sub>OUT</sub> < 2.0 V		-20		20	mV
	-40°C ≤ T <sub>A</sub> ≤ 85°C	V <sub>OUT</sub> ≥ 2.0 V		x0.97		x1.03	V
		V <sub>OUT</sub> < 2.0 V		-60		60	mV

## APPLICATION INFORMATION

A typical application circuit for NCP4683 series is shown in Figure 59.

**Figure 59. Typical Application Schematic**

**Input Decoupling Capacitor (C1)**

A  $1\text{ }\mu\text{F}$  ceramic input decoupling capacitor should be connected as close as possible to the input and ground pin of the NCP4683. Higher values and lower ESR improves line transient response.

**Output Decoupling Capacitor (C2)**

A  $1\text{ }\mu\text{F}$  ceramic output decoupling capacitor is enough to achieve stable operation of the IC. If a tantalum capacitor is used, and its ESR is high, loop oscillation may result. The capacitors should be connected as close as possible to the output and ground pins. Larger values and lower ESR improves dynamic parameters.

**Enable Operation**

The enable pin CE may be used for turning the regulator on and off. The IC is switched on when a high level voltage is applied to the CE pin. The enable pin has an internal pull

down current source. If the enable function is not needed connect CE pin to VIN.

**Current Limit**

This regulator includes fold-back type current limit circuit. This type of protection doesn't limit current up to current capability in normal operation, but when over current occurs, output voltage and current decrease until over current condition ends. Typical characteristics of this protection type can be observed in the Output Voltage vs. Output Current graphs shown in the typical characteristics chapter of this datasheet.

**Output Discharger**

The D version includes a transistor between VOUT and GND that is used for faster discharging of the output capacitor. This function is activated when the IC goes into disable mode.

**Thermal**

As power across the IC increase, it might become necessary to provide some thermal relief. The maximum power dissipation supported by the device is dependent upon board design and layout. Mounting pad configuration on the PCB, the board material, and also the ambient temperature affect the rate of temperature increase for the part. When the device has good thermal conductivity through the PCB the junction temperature will be relatively low in high power dissipation applications.

**PCB layout**

Make the VIN and GND line as large as practical. If their impedance is high, noise pickup or unstable operation may result. Connect capacitors C1 and C2 as close as possible to the IC, and make wiring as short as possible.
