

The MC100ES6014 is a low skew 1-to-5 differential driver, designed with clock distribution in mind, accepting two clock sources into an input multiplexer. The ECL/PECL input signals can be either differential or single-ended (if the V_{BB} output is used). HSTL and LVDS inputs can be used when the ES6014 is operating under PECL conditions.

The ES6014 specifically guarantees low output-to-output skew. Optimal design, layout, and processing minimize skew within a device and from device to device.

To ensure that the tight skew specification is realized, both sides of any differential output need to be terminated identically into 50Ω even if only one output is being used. If an output pair is unused, both outputs may be left open (underterminated) without affecting skew.

The common enable (\overline{EN}) is synchronous, outputs are enabled/disabled in the LOW state. This avoids a runt clock pulse when the device is enabled/disabled as can happen with an asynchronous control. The internal flip flop is clocked on the falling edge of the input clock; therefore, all associated specification limits are referenced to the negative edge of the clock input.

The MC100ES6014, as with most other ECL devices, can be operated from a positive V_{CC} supply in PECL mode. This allows the ES6014 to be used for high performance clock distribution in +3.3 V or +2.5 V systems. Single ended CLK input pin operation is limited to a $V_{CC} \geq 3.0$ V in PECL mode, or $V_{EE} \leq -3.0$ V in ECL mode. Designers can take advantage of the ES6014's performance to distribute low skew clocks across the backplane or the board.

Features

- 25 ps Within Device Skew
- 400 ps Typical Propagation Delay
- Maximum Frequency > 2 GHz Typical
- The 100 Series Contains Temperature Compensation
- PECL and HSTL Mode: $V_{CC} = 2.375$ V to 3.8 V with $V_{EE} = 0$ V
- ECL Mode: $V_{CC} = 0$ V with $V_{EE} = -2.375$ V to -3.8 V
- LVDS and HSTL Input Compatible
- Open Input Default State
- 20-Lead Pb-Free Package Available
- **Replacement part: ICS853S014I**

Table 1. Pin Description

Pin	Function
CLK0*, CLK0**	ECL/PECL/HSTL CLK Input
CLK1*, CLK1**	ECL/PECL/HSTL CLK Input
Q0:4, Q0:4	ECL/PECL Outputs
CLK_SEL*	ECL/PECL Active Clock Select Input
EN*	ECL Sync Enable
V_{BB}	Reference Voltage Output
V_{CC}	Positive Supply
V_{EE}	Negative Supply

* Pins will default LOW when left open.

** Pins will default to $V_{CC}/2$ when left open.
